Open the Autocad Applications window. Double-click on the keygen file which you got from the ftp There will be an installer package in there. Double-click on it. It will start the Autocad installation process. Once the installation has completed you will be able to create files in Adobe Illustrator or Microsoft Powerpoint. 3. How to uninstall Autocad from your system. Uninstall Autocad from Control Panel or by using the following command. control panel uninstall Autocad Then just delete the keygen file and the uninstall package. 4. General warning. If you are installing the keygen on a system that you do not have the admin password for, the keygen will install with admin rights. This is good, however in the case that you do not have the admin password, you will have to obtain a new one. If you are having problems using the keygen then there is one solution. Turn off file and program sharing. This can be done by going into the computer configuration and deselecting the "Automatically save my passwords". If you do this, you will have to manually enter a password every time you use the keygen. 5. Language issue. If you are having a problem reading the keys on the keygen or the installer it is because you are in a different language than the language that the keys are written in. If you are in the same language as the rest of the keys on the keygen, you will not have a problem. There is no reason why the keys can not be made in other languages so if you do want the keys translated into your language please email me at: spinterb@gmail.com Please send me the language that you want the keys translated into and I will check it for you.
