Foldda Integrator

Foldda Integrator, commonly referred to as the "IntelliJ for Health Care", is a comprehensive medical middleware application, designed to enhance healthcare operating systems. Designed to ensure that a system administrator has access to all available capabilities, Foldda Integrator provides all the key services, as well as a feature-rich application framework for successful data exchange. Built with intuitive UI and customization possibilities, the program is capable of facilitating the exchange of data between various applications, as well as set up the job-list. For instance, Foldda Integrator can be used to export data in human readable format, or parse Excel files without the need of any installed desktop application. Furthermore, Foldda Integrator possesses the following notable features: Pertaining to data transformation If there is a lack of a suitable program for visualizing the data in a desired format, Foldda Integrator can be applied. This piece of software will enable you to directly input into the application the need for data conversion, thus offering you the chance to rearrange the order of the columns as well as switch data types accordingly. As a result, you will be able to convert all the input data into CSV or HL7 formats. As a matter of fact, Foldda Integrator can process and aggregate input data, as well as set data retrieval rules with the help of field comparison, regular expression, or regular-expression-match operators. As a programmatic solution, Foldda Integrator allows for executing any HL7 2.5/3.0/3.1/3.5/3.8 compliant serial or transaction definitions, as well as HL7 V2/3/4 and FHIR/FHIRconsent. When supported, you can also use Foldda Integrator to perform the following data transformations: Convert characters Rather than installing a separate application, the ability to perform character conversions and decomposition has been integrated into Foldda Integrator. With this application, you can perform several fundamental as well as complex character conversions, as well as convert uppercase/lowercase characters and decode encoded characters. Be it that, you will be able to use Foldda Integrator for decomposing & encoding your character data, and other basic and advanced tasks.
