The testing to do so were done with a Samsung Galaxy 2 with a Verizon network when out and about, but they generally got good enough reception for voice calls and Internet browsing. The GPS part worked well in general, and the battery life when playing Audio Books via Audible was pretty good. I have a motorola phone, so if you all have a usb lead available, you can check the paper drive if my review is still valid. I can confirm that the Galaxy S2 can be used to root via the app that is free from ES File Explorer. For the record, I do have an Asus Transformer, but it was not used for my tests. Im just about to get my s2 on ebay tomorrow. It should be a good sale to you all. Click to expand... Keep the love flowing! I had the Verizon one in the box and it immediately said "factory reset" when I plugged it in. I felt like I should've done a backup of stuff first... I have a motorola phone, so if you all have a usb lead available, you can check the paper drive if my review is still valid. Keep the love flowing! Click to expand... I'll plug it in now, and we'll see if I can access it. FrankW, if you want to do a drive check, maybe you can access it from your computer if I can get ES File Explorer open. I have to say, I love my S2 so much more than I thought I would. Of course the Note 3's actionability is so great
